Ganesh Prasad Bhatt

Senior Full-Stack Developer

Kathmandu, Nepal | bhattaganesh05@gmail.com | linkedin.com/in/ganesh-bhatta | github.com/bhattaganesh

PROFESSIONAL SUMMARY

Senior full-stack developer (PHP, WordPress, React) with nearly five years on commercial plugins. At Brainstorm Force I was a core developer on Spectra Blocks, the ground-up rebuild of Spectra (1,000,000+ active installations, now Spectra Legacy). At ThemeGrill I have merged 380+ pull requests across LMS, membership, form, and Gutenberg block products; as a Senior Developer I work across the product line on new features, stability, performance, and releases.

EXPERIENCE

Senior Developer, ThemeGrill

Kathmandu, Nepal (Hybrid) | Apr 2026 – Present

Senior developer across ThemeGrill's portfolio of WordPress plugins, add-ons, and themes, driving new features, stability, performance, and security.

Masteriyo LMS

- Led a security overhaul of the REST API across the free and Pro plugins, closing multiple high-severity vulnerabilities, including two rated CVSS 8.8, and tightening access control throughout the product.
- Built major capabilities: a "View as Student" mode for instructors, an Abilities API layer that lets AI agents work with the LMS, an H5P integration, and a migration engine on Action Scheduler that imports courses from five competing LMS plugins.
- Resolved performance bottlenecks on large courses and introduced an AI-assisted development workflow with Claude Code.

User Registration & Membership

- Strengthened subscription billing across PayPal, Stripe, and Authorize.Net by resolving critical payment and renewal issues and refactoring the legacy billing code.
- Extended WooCommerce content restriction, improved front-end form accessibility against WCAG 2.2 AA, and reduced what loads on every public page.

Magazine Blocks and BlockArt

- Drive planning, development, and releases for both block plugins; modernized Magazine Blocks onto Block API v3 and shipped a steady run of security-hardening and stability releases.

Engineering practice

- Built out automated testing across 60+ PHPUnit and Playwright test files, including regression suites; maintain GitHub Actions release pipelines and keep products compatible with PHP 8.5 and WordPress 7.1.

Software Engineer, Brainstorm Force

Remote | Jan 2025 – Mar 2026

Core developer on Spectra Blocks, the ground-up rebuild of Spectra (1,000,000+ active installations) on Block API v3 and the Interactivity API. It shipped as betas inside Spectra, then as a separate plugin; the original became Spectra Legacy.

- Worked on the core architecture: the plugin structure, the first blocks, the extension framework, the REST API layer, and the responsive controls system for separate desktop, tablet, and mobile values.
- Built the Post and Countdown blocks, co-built the core Content block, and built the Pro Loop Builder (query-driven post grids with filters, search, and pagination on the Interactivity API) with its developer documentation.
- Built extensions including Dynamic Content, Animations, Motion Effects, and Sticky Container.
- Moved the block set to Block API v3 for the WordPress 7.0 iframe editor, wrote the migration guide, and resolved WordPress.org review findings for Spectra Blocks.
- Maintained Spectra Legacy with bug, security, and performance fixes.

Senior PHP Developer, ThemeGrill

Kathmandu, Nepal (Hybrid) | Dec 2021 – Jan 2025 | Joined as an intern; promoted to Junior, then Senior

Masteriyo LMS (2023 – 2025)

- Led backend development (a separate team lead owned the product), reviewed code, mentored developers, and interviewed candidates.
- Built many of the product's core features, including AI course generation with OpenAI, SCORM, course bundles, group courses, a certificate builder, multiple currencies, payment gateways, migration from other LMS plugins, bulk import and export, and REST API authentication.
- Improved performance and security across the REST API and contributed to the React and Chakra UI front end.

Everest Forms, User Registration, and internal analytics

- Built premium add-ons for Everest Forms (90,000+ installations): payment and cloud-storage integrations, CRM and email-marketing connectors, and new field types.
- Built authentication and profile features for User Registration, including passwordless login and profile completeness.
- Built ThemeGrill's internal analytics platform, with reporting dashboards over indexed, company-wide usage data.

TECHNICAL SKILLS

Languages: PHP (OOP, MVC), JavaScript, TypeScript, SQL, HTML, CSS

WordPress: Plugin and theme development, Gutenberg blocks, REST API, Interactivity API, Abilities API, WooCommerce, Elementor

Front end: React, Chakra UI, React Query, React Hook Form, Tailwind CSS

Data, payments and APIs: MySQL query optimization and indexing, Action Scheduler, Stripe, PayPal, Authorize.Net, Razorpay, Lemon Squeezy, webhooks and third-party API integrations

Security and accessibility: XSS, IDOR, CSRF, and privilege-escalation fixes; Burp Suite; WCAG 2.2 AA

Testing and tools: PHPUnit, Playwright, Postman, Thunder Client, Git, GitHub Actions, Composer, npm, pnpm, Webpack, Docker, Jira

AI development: Claude Code, Codex, Cursor, Google Antigravity; OpenAI and OpenRouter API integrations; Model Context Protocol (MCP)

EDUCATION

B.Sc. in Computer Science and Information Technology (CSIT), Siddhanath Science Campus, Tribhuvan University, Kanchanpur, Nepal | 2021

LANGUAGES

English, Nepali, Hindi
